

May 2010

*Loreto Homes:*

*Thomas and Greg,*

*We just wanted to take time to write and thank you for our new home you built for us this past year, it becomes more "home" to us each day. From the start your attention to the details was so encouraging, from taking the picture and rough drawing we had to making it happen for real, we knew you were focused on pleasing us and building a quality product. Yes, we started with the dimensions of the garage we wanted and you worked around that, we are so pleased how you made the house fit and it all looks so nice on the steep lot we chose. To be sure we are so thankful you thought ahead and the boat fits in the garage! Even when there were building challenges you met those head on and we now are more comfortable knowing there will be no future problems.*

*Can't tell you how much the floor plan works for us and it is "just right". We also are thankful you planned for future expansion if necessary, on the lower level. We are awed over how much storage we ended up with – we need more stuff! The little details are so appreciated, the hardware you use, the trim work, the hardwood floors, solar tubes, the custom kitchen, all of the can lights we wanted and the suggestions for making the vertical siding attractive on the back of the house – you were right. We will enjoy the quality construction and the energy saving features as the years go by. Thank you for the followup after we moved in and always answering our calls and sticking with us until all the work was completed.*

*We would not hesitate to recommend Loreto Homes to others who are thinking of building and would call on you again if needed. We wish you much continued success!*

*Warm Regards,*

*John and Deanna Kwyzla*
